

APEX MANUFACTURING — INTERNAL MEMORANDUM

Memo ID: MEMO-2025-072

Date: July 1, 2025

From: David Park, Procurement Manager

To: Procurement Team, Production Planning

Subject: Temporary Authorization for Expedited Shipping from International Suppliers

Due to increased customer demand in Q3 2025, I am temporarily authorizing the use of air freight for international supplier shipments where ocean freight lead times would cause production delays.

Effective July 1, 2025 through September 30, 2025, international suppliers may be asked to ship via air freight at Apex Manufacturing's expense. When air freight is used, the effective lead time for international suppliers is reduced by 14 days from their standard catalog lead time (but not below 7 days minimum).

Air freight authorization is limited to components needed for confirmed production orders. Speculative or safety-stock orders do not qualify for air freight.

The additional cost of air freight (estimated at \$8-12 per kg) should be documented on the purchase order. Total air freight expenditure is capped at \$25,000 for the authorization period. The Procurement Manager must approve each air freight request individually.

This authorization does not override any other procurement policy requirements including supplier certification and hazardous materials handling.
