

APEX MANUFACTURING — INTERNAL MEMORANDUM

Memo ID: MEMO-2025-085

Date: August 20, 2025

From: Maria Santos, Quality Assurance Director

To: Procurement Team, Production Planning, Electronics Assembly

Subject: Enhanced Quality Requirements for PCB Components

Following the identification of micro-cracking issues in two recent PCB lots, I am implementing enhanced quality measures for all printed circuit board components (RM-3005) effective immediately.

New requirements (effective August 20, 2025):

1. PCB suppliers must provide a Certificate of Conformance (CoC) with each shipment including cross-section analysis results. Shipments without a CoC will be rejected at receiving and returned to the supplier.
2. Until further notice, we are suspending new supplier qualification for PCB components. Only suppliers from whom we have previously received and accepted PCB shipments may be used. If a PCB supplier is new to us, we cannot order PCBs from them at this time.

These measures will remain in effect until the root cause investigation is complete and corrective actions are verified, estimated 60-90 days.
